

# TRIVACO Process Automation

*In-house UL Panel Shop*

TRIVACO Process Automation understands the many dimensions of infrastructure upgrade and design build projects. We can define and document how your process works, determine how to improve operational efficiency, and then help you to design, build and operate your new or improved system.

Our construction staff and support personnel employ their diverse skills to assess, design, construct, integrate, and commission your project along with the ability and personnel to provide maintenance. TRIVACO is a one-stop shop when it comes to Process Automation. Our in house control panel shop is UL 508A (non-hazardous) certified. TRIVACO Process Automation can build control panels to your specifications or we can provide custom panels designed to meet your needs.

TRIVACO Process Automation is proud to be a member of the Rockwell Automation PartnerNetwork™ program as an OEM Program Participant.
